EXPERIMENT 3a: PROTOTYPE WITH NAVIGATION USING PROTO.IO

Aim:

To create a prototype in Proto.io that demonstrates **navigation flow** (moving between screens, menus, or sections) to test usability and design decisions.

Prototype Structure

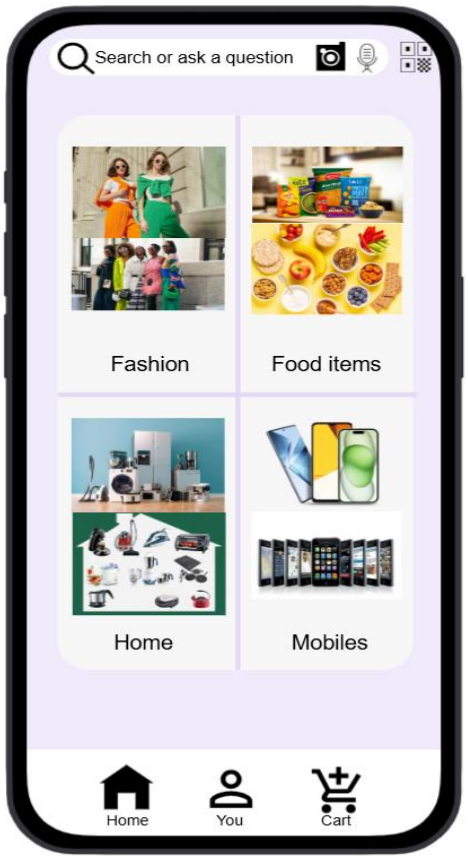
- **Home Tab** → product listings or featured items.
- **You Tab** → user profile, preferences, or account details.
- **Cart Tab** → items added for checkout.

Navigation Flow Tasks

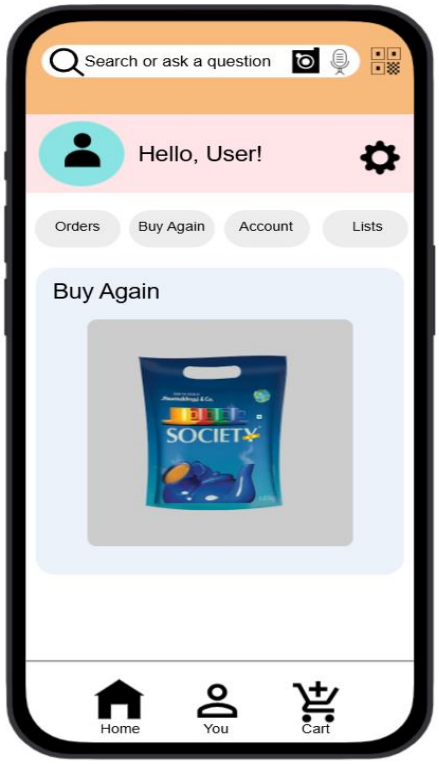
- Task 1: Start at Home → go to Cart → return to Home.
- Task 2: From Home → go to You → update profile → return to Cart.
- Task 3: Switch between all three tabs quickly to simulate browsing.

Output:

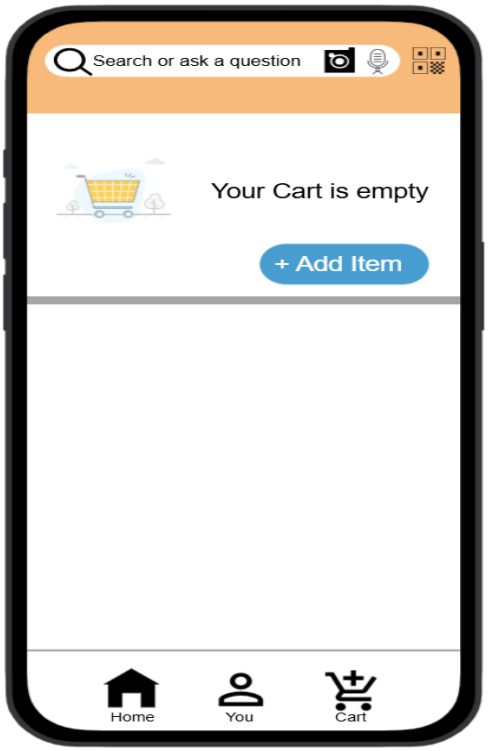
A. Home page



B. You page



C. Cart page



Result:

The experiment shows that **bottom tab navigation is highly intuitive and efficient** for a 3-screen setup.
